S3

Leadership

Learned to mobilize team effort through clear task allocation and motivation, significantly boosting team efficiency.

Next

Gas Station: My takeaways

Innovation

Developed ability to design solutions for real business problems and apply AI to automate and optimize complex processes.

Resilience

Persistence through challenge to build reliable tools. Tested functions 100+ times to a product excellence.

Next Station

Empowering HEC

Class project Empowerment

Integrate AI tool development insights into business case analysis and solution design, enhancing classroom projects' efficiency and innovation. Share practical experiences in team collaboration and problem-solving.

Club Empowerment

Share AI tool development expertise to help clubs design AI-assisted tools, enriching activities and operational efficiency. Foster member understanding and application of AI technology.

Facilitate Career Development - Fintech+Consulting

Technical Implementation Experience

I have been involved in the complete process from requirements to deployment, enabling me to pragmatically evaluate project timelines, resource needs, and risks, thereby avoiding consulting solutions that are merely theoretical.

Process Automation Insight

AI tools often focus on automating repetitive tasks. I can help financial institutions optimize operational workflows to reduce costs and enhance efficiency.

Dare to learn, dare to act
